

Atrium Health **Carolinas Rehabilitation Hospital** Charlotte, North Carolina

The new hospital grew out of the need to modernize an outdated 1950s-era facility and enable staff to increase the impact of their nationally recognized care, enhance the patient experience and create an identity for the program. Intensive stakeholder engagement sessions occurred during predesign efforts leading to design guides that identified key priorities for staff, patients and families. These design toolkits focused on items such as facilitating independency and normalcy, prioritizing safety, inspiring hope and healing, and supporting the family's journey to create a welcoming experience and streamline discharge.

Just as tendon connects muscle to bone, the design of Carolinas Rehabilitation Hospital unites people to purpose. Through the visibility of personal rehab stories and the prioritization of accessibility and maneuverability, the building sinuously connects people to empowering experiences within a range of therapy spaces.

CONTEXT

Nestled along the Little Sugar Creek Greenway, south of Charlotte, the new rehabilitation hospital becomes the cornerstone of the Atrium campus.

GRAPHIC DEPLOYMENT

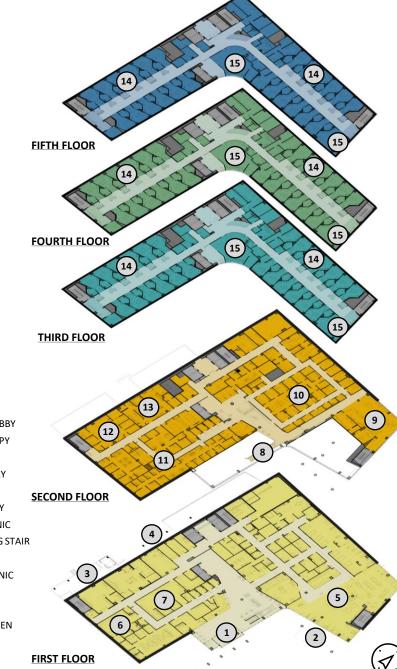

PIEDMONT | GREEN THEME

MOUNTAINS | TEAL THEME

12 PHARMACY 13 WARMING KITCHEN

14 PATIENT ROOMS

15 DAY SPACE

Uplifting architectural motifs subtly convey an optimistic message of progressive movement representative of a patient's journey towards their holistic rehabilitation.

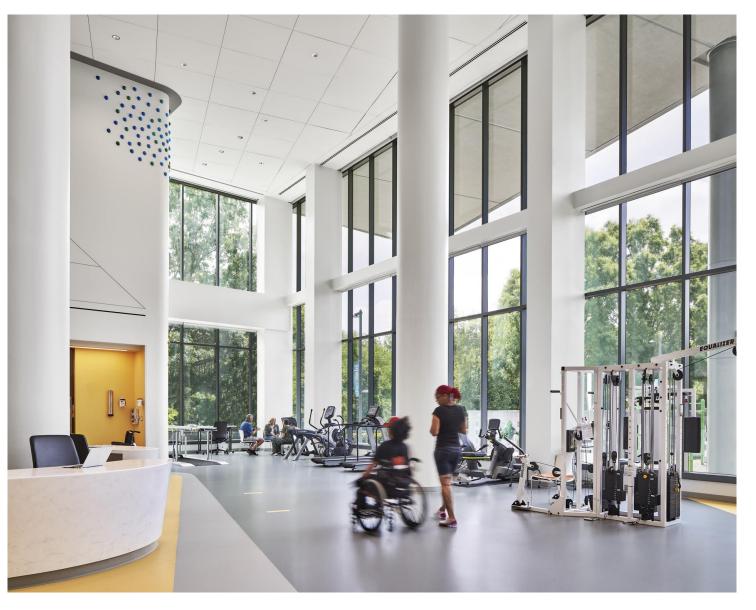

Biophilic design principles were fundamental to the planning of Carolinas Rehabilitation. The thoughtfully sited building enables facility growth while highlighting access and views to nature with expansive windows.

Circulation, waiting and community spaces were designed with intentional openness, allowing all users to feel welcome. Wider doorways, radiused corners and flush floor transitions increase maneuverability for patients, enable independence, and **empathize with a new normal.**

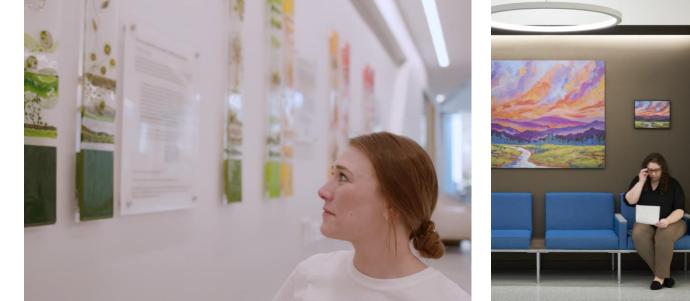

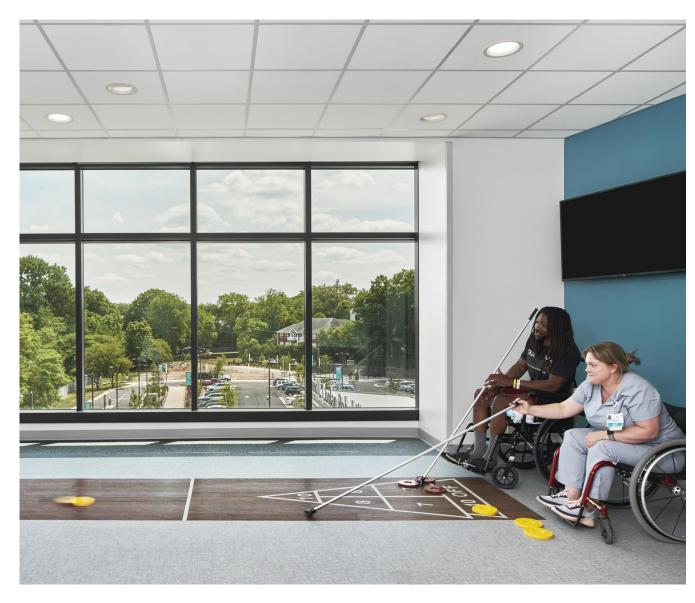

To build hope and wellness, the project unites design, environmental graphics and curated art that inspire, empathize and empower, encouraging patients to live without barriers.

Thoughtfully integrated artwork featuring minority, regional and mouth painting artists foster personal connections, create visual landmarking and provides positive distractions

Unique rehabilitation details and program elements such as distance markers, shuffleboard floor patterning and playful tile in the aquatic pool are integrated throughout

Intuitive wayfinding connects to place by deploying color and graphic themes based on the Carolina biomes: mountains, piedmont, coastal
